

Problem - Solution Fit

Date	Team ID	Project Name
30 September 2026	SWTID-2026-9981	PocketSmart AI: Your Smart Budget & Recommendation Assistant

Canvas Section	Details
Customer Segment	College students, early-career professionals and small households with a fixed monthly income who pay through UPI, cards and cash.
Jobs to be Done / Problems	Know where the money goes; stay within a monthly limit; save towards a goal; decide what to buy without overspending.
Triggers	Running out of money before month end; a large unplanned expense; a new savings goal; start of a new month.
Emotions: Before	Anxious, guilty, confused about spending, lack of control.
Emotions: After	Confident, in control, motivated to save, proud of progress.
Available Solutions	Notebooks and spreadsheets, bank statements, generic expense trackers.
Problems with Existing Solutions	Manual and time-consuming; no automatic categorisation; alerts come late; no personalised recommendations; some apps need bank access, which raises privacy concerns.
Root Cause	Expense data is scattered and never turned into simple, timely guidance.
Behaviour	Users check spending only at month end, skip logging small expenses and buy on impulse.
Channels of Behaviour - Online	Searches for budgeting tips, uses UPI and shopping apps, compares prices.
Channels of Behaviour - Offline	Talks to family and friends about money, keeps paper notes, tracks cash in a diary.
Our Solution	PocketSmart AI records expenses, categorises them automatically, alerts before the limit is crossed and recommends budget-friendly choices, without needing bank credentials.
