

Proposed Solution

Date	Team ID	Project Name
30 September 2026	SWTID-2026-9981	PocketSmart AI: Your Smart Budget & Recommendation Assistant

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	People with a limited monthly income cannot easily track spending, receive timely overspending warnings or get personalised guidance on saving and buying decisions.
2	Idea / Solution Description	PocketSmart AI is a web-based smart budget and recommendation assistant. Users enter income and expenses; the system categorises each expense automatically, compares spending with category budgets, shows insights and uses an LLM to give personalised saving tips and budget-friendly product suggestions. A chat assistant answers questions about the user's own data.
3	Novelty / Uniqueness	Combines automatic categorisation, budget alerts and AI-based recommendations in one lightweight app; recommendations are tied to the user's remaining budget; no bank login is required.
4	Social Impact / Customer Satisfaction	Improves financial awareness and saving habits among students and young earners and reduces month-end money stress.
5	Business Model (Revenue Model)	Free basic plan for tracking and budgets; premium plan with advanced insights, savings goal planning and unlimited AI recommendations; optional partner deal placements clearly marked as sponsored.
6	Scalability of the Solution	Modular architecture; database can move from SQLite to a cloud database; more languages, bank statement import and reminders can be added; the app can be packaged as a mobile application.
